- A** Base x1 
- B** LH panel x1 
- C** RH panel x1 
- D** Insert panel x1 
- E** Confectionery shelf x1/2 
- F** 3T news shelf x4/8 
- G** Small news shelf x1/2 
- H** Shelf - 140mm x1/2 
- I** Divider x1/2 
- J** Thumb screw x8 

**1.**

First, take base (A) and ensure brakes are applied to the two castors that have them. Braked castors are at opposite corners of base.

**2.**

With the base locked in place, drop the RH panel (C) into the base (A) as shown above.

**3.**

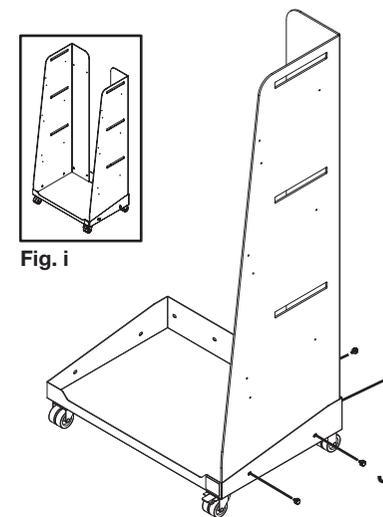

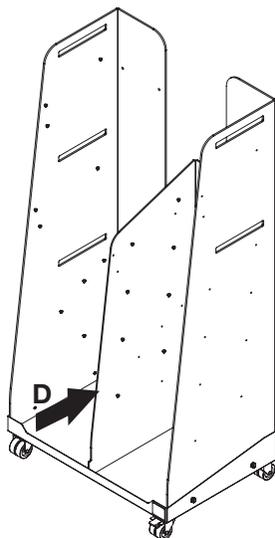

Fig. i

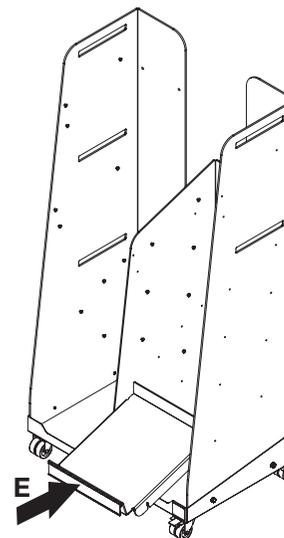

Next secure the RH panel (C) in place with x4 thumb screws (J). Repeat steps 2 and 3 for the LH panel (B). Both LH and RH panels should now be in place as in Fig. i

**4.**

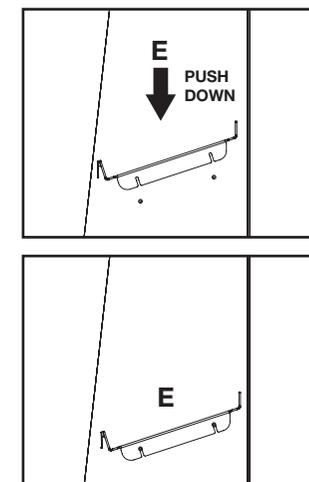

Next place the insert panel (D) onto the base as shown.

**5.**

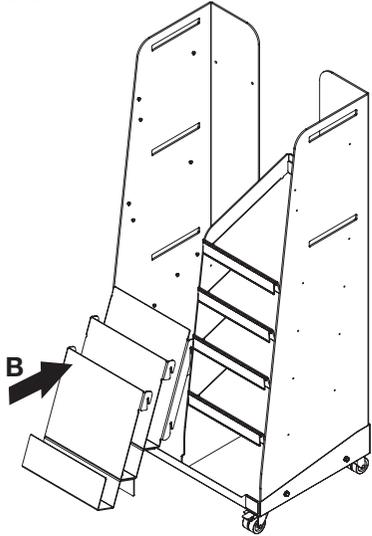

Take the first confectionery shelf (E) and locate the slots on the sides onto the lowest set of metal studs on the right hand panel of the existing display and the insert panel (D).

**6.**

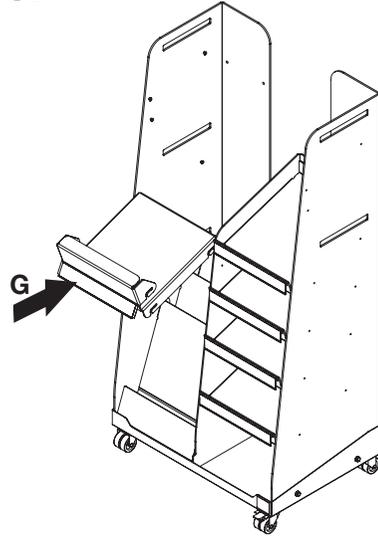

Guide the slots on the sides of the shelf onto the metal studs and push down until the shelf 'snaps' into place.

7.

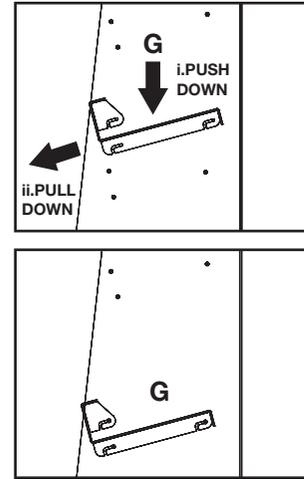

Take the pre-assembled 3 tier shelf (F) and locate it between the 4 tier module on the right and the body panel on the left. Snap the shelf (F) into place with the slots on the shelf locating with the metal studs on the body panels.

8.

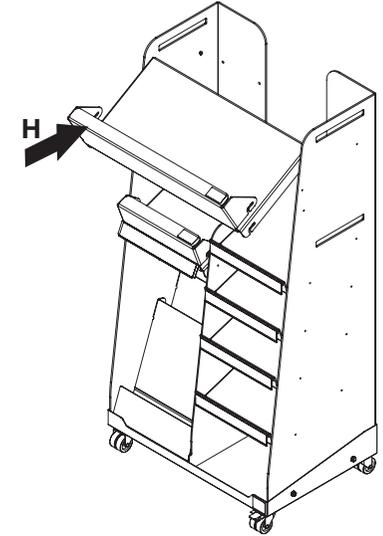

Take the small news shelf (G) and position over the metal studs on the left hand panel of the existing display (B) and the insert panel (D).

9.

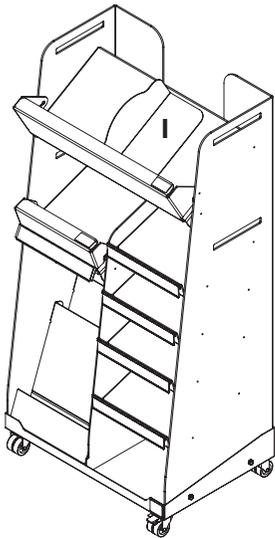

Guide the slots onto the metal studs. Push down and pull towards the front until the shelf 'snaps' into place.

10.

Install the 140mm shelf (H) on the top set of metal studs and snap in place as shown in step 9.

11.

Finally place the divider (I) in the 140mm deep top shelf (H). The display is now complete and ready to be merchandised.
